

IN THE SPECIFICATION:

Please correct the specification, the first full paragraph on page 15, to read as follows:

The levels on the distal side of body ~~100~~ 104 are sliding one on top of the other. Distance level 12 is attached to a lever ~~102~~ 106 and may be moved inwardly and outwardly. In the same manner, middle level 16 and upper level 22 may be moved in an inward and outward directions by levers ~~104~~ 108 and ~~106~~ 110. Riser 18 may be also moved by lever ~~108~~ 112. Each one of the levers has a fastening means (not shown in the Figure) that fastens and fixes the leverage system after adjusting the levels to a comfortable position by the user. The fastening means prevents the levels from sliding one on top of the other while the user uses the ergonomic keyboard.
